ROTARY VANE VACUUM PUMPS VTLF OIL-LESS PUMP

The Clear Choice for Vacuum Hold Down

When it comes to holding down your product, the Becker VTFL 2 Series oil-less rotary vane pumps are clearly better than competitive vacuum pumps. Not only do the VTFL model 2 pumps run cooler and quieter, they have a deeper end vacuum level than our competitor's dry vane pumps. The world's most popular pump in the CNC router industry has features designed specifically for those applications where dirt and dust are present. Whether you're holding down wood, plastic or metal, Becker pumps are the clear choice for all CNC router applications.

Benefits of the VTFL Oil-Less Vacuum Pump

Save Time

- Our clear filter cover permits visual inspection of the filter without having to remove the cover.
- Only four thumbscrews on the cover for ease of service.

Save Money

- The inlet filter has been enlarged by 50% to reduce the need for filter changes.
- Cooler running means extended vane life.

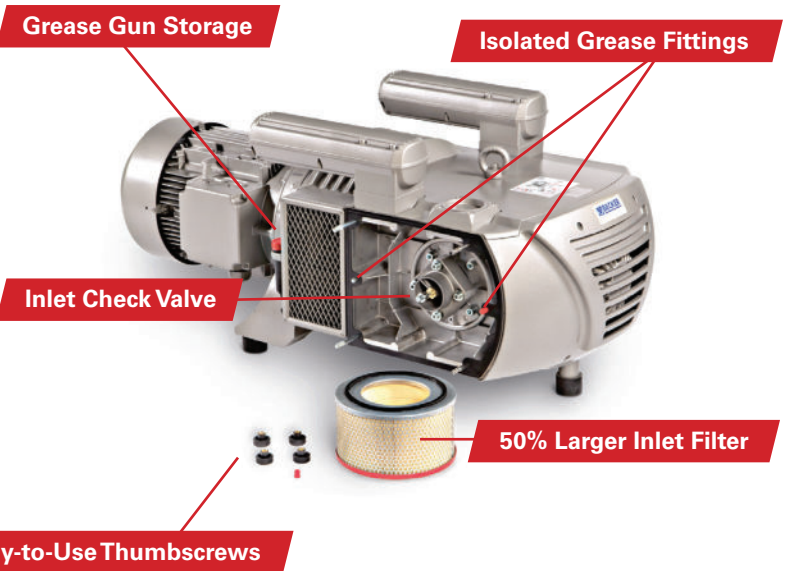

Save Downtime

- An inlet check valve is included to prevent backward vane rotation to eliminate premature vane wear.
- Built-in mounting bracket for the grease gun so it won't get misplaced.

With all of these benefits, the VTFL 2 Series is the clear choice in vacuum pumps for your application.

Features

- Maximum Vacuum: 27" Hg.
- Runs Quieter
- Runs Cooler
- Clear Filter Cover
